Issue #82 (April/May 2018) Get to Work with a Tool Stool Custom-made tool holders

## How to trick out your **TOOL STOOL**

My tool stool is designed to hold a load of tools. For interior storage, you've got a top tool tray (accessible beneath a hinged top), and two drawers. Outside, there's storage space on the stool's ends and back. On these outside surfaces, it makes sense to store the tools you are likely to use the most. You'll need to make some special holders for your outer tools. This isn't difficult to do if you make use of commonly available materials: scrap wood, magnets, dowels, T-nuts, and a spring clip or two. Take a look at the photos for some tips on these outside tool holders. And good luck in tricking out your tool stool!
